Trait Category

Morphology (https://www.gephebase.org/search-criteria?/and+Trait Category=^Morphology^#gephebase-summary-title)

Trait

Coloration (wing; seasonal) (https://www.gephebase.org/search-criteria?/and+Trait=^Coloration (wing; seasonal)^#gephebase-summary-title)

Trait State in Taxon A

Plastic line - the dark red wing phenotype is induced by environmental cues

Trait State in Taxon B

Red line - the dark red wing phenotype is formed irrespective of the external conditions

Ancestral State

Taxon A

Taxonomic Status

Experimental Evolution (https://www.gephebase.org/search-criteria?/and+Taxonomic Status=^Experimental Evolution^#gephebase-summary-title)

Taxon A

Latin Name

Junonia coenia (https://www.gephebase.org/search-criteria?/and+Taxon and Synonyms=^Junonia coenia^#gephebase-summary-title)

Common Name

buckeye

Synonyms

Precis coenia; buckeye; peacock butterfly; Junonia coenia Hubner, 1822

Rank

species

Lineage

cellular organisms; Eukaryota; Opisthokonta; Metazoa; Eumetazoa; Bilateria; Protostomia; Ecdysozoa; Panarthropoda; Arthropoda; Mandibulata; Pancrustacea; Hexapoda; Insecta; Dicondylia; Pterygota; Neoptera; Endopterygota; Amphiesmenoptera; Lepidoptera; Glossata; Neolepidoptera; Heteroneura; Ditrysia; Obtectomera; Papilionoidea; Nymphalidae; Nymphalinae; Junoniini; Junonia

Parent

Junonia (buckeyes) - (Rank: genus) (https://www.ncbi.nlm.nih.gov/Taxonomy/Browser/wwwtax.cgi?id= 39707)

NCBI Taxonomy ID

39708 (https://www.ncbi.nlm.nih.gov/Taxonomy/Browser/wwwtax.cgi?id= 39708)

is Taxon A an Infraspecies?

No

Taxon B

Latin Name

Junonia coenia (https://www.gephebase.org/search-criteria?/and+Taxon and Synonyms=^Junonia coenia^#gephebase-summary-title)

Common Name

buckeye

Synonyms

Precis coenia; buckeye; peacock butterfly; Junonia coenia Hubner, 1822

Abstract

Developmental plasticity allows genomes to encode multiple distinct phenotypes that can be differentially manifested in response to environmental cues. Alternative plastic phenotypes can be selected through a process called genetic assimilation, although the mechanisms are still poorly understood. We assimilated a seasonal wing color phenotype in a naturally plastic population of butterflies (Junonia coenia) and characterized three responsible genes. Endocrine assays and chromatin accessibility and conformation analyses showed that the transition of wing coloration from an environmentally determined trait to a predominantly genetic trait occurred through selection for regulatory alleles of downstream wing-patterning genes. This mode of genetic evolution is likely favored by selection because it allows tissue- and trait-specific tuning of reaction norms without affecting core cue detection or transduction mechanisms.

COMMENTS

@Parallelism @GxE The two color morphs of Junonia coenia, light tan and dark red, depend on day length and temperature.
