Diverse cadherin mutations conferring resistance to <i>Bacillus thuringiensis</i> toxin Cry1Ac in <i>Helicoverpa armigera</i> . (2010) ( <a href="https://pubmed.ncbi.nlm.nih.gov/20079435">https://pubmed.ncbi.nlm.nih.gov/20079435</a> )	Main Reference

Transgenic cotton expressing <i>Bacillus thuringiensis</i> (Bt) toxins has been widely adopted to control some key lepidopteran pests including the bollworm <i>Helicoverpa armigera</i> . Evolution of resistance to Bt cotton by target pests is a major threat to the continued success of Bt cotton. Previous results revealed 3 null alleles (r1-r3) of a cadherin gene (Ha_BtR) conferring Cry1Ac resistance in <i>H. armigera</i> . An F(1) screen of 123 single-pair families was conducted between a Cry1Ac-resistant strain (the SCD-r1 strain, homozygous for the r1 allele of Ha_BtR) and field-derived insects from Jiangpu population (Jiangsu province, China) in 2008. Five new null alleles of Ha_BtR (r4-r8) were identified in six candidate single-pair families. These null alleles were created through either an insertion or a point mutation. Interestingly, intact alleles of Ha_BtR were found in two field-derived insects from another two candidate single-pair families. It suggests that these two field-derived insects may carry novel resistance alleles of Ha_BtR, with missense mutations resulting in a non-functional cadherin protein, or a major dominant mutation at a locus other than cadherin. The resistance allele frequency of Ha_BtR was detected at an appreciable level (0.024) in the Jiangpu population of <i>H. armigera</i> in 2008. Together with previous findings, a total of eight different resistance alleles of Ha_BtR were identified from three Chinese strains of <i>H. armigera</i> . Mutational diversity of Ha_BtR could impair DNA screening for Bt resistance allele frequency in the field, and an F(1) screen should be used routinely for monitoring cadherin-based resistance allele frequencies in <i>H. armigera</i> .
